4. With respect to claims 1-4, 8-9 and 11, the reference discloses a time indicator 2601-2607 in Figs. 26a-26d that provides a color indicia after a predetermined period of time has passed after activation (see col. 42, lines 37-39), comprising: a substrate 2601 having an upper surface and a lower surface (top and bottom surfaces thereof) and a first portion (portion comprising "INDICIA") and a second portion joined at a fold line (portion above the "INDICIA" portion in Figs. 26c, the first portion being smaller in area than the second portion; an adhesive 2602 coating the upper surface of at least the second portion of the substrate (see col. 42, line 2), a first reactant 2605 adhered to the upper surface of the first portion of the substrate; a second reactant 2602 adhered to the upper surface of the second portion of the substrate; whereby when the first portion is folded along the fold line (col. 42, lines 26-27) so that the upper surfaces of the substrate contact each other, a portion of the adhesive on the second portion remains exposed (col., 42, line 30) and the first reactant and second reactant contact each other to activate the indicator and to provide the color indicia after the predetermined period of time after activation passes (col. 35, lines 35-39), wherein the first reactant is a printed indicia and the second reactant is the adhesive, wherein the substrate is transparent (col. 42, line 2), wherein the color indicia can be viewed through the lower surface of the substrate (col. 42, line 39). With respect to claim 10, the second reactant is a chemical residue (activator 2602 causes chemical reaction, col. 42, line 36).
